## **DETAILED ACTION**

## Response to Arguments

Applicant's arguments filed September 15, 2006 have been fully considered but they are not persuasive. The argument that "Montet ('704) fails to teach or suggest "a cup-shaped axially positioned cap serving as an optical screening means that partly surrounds the light source for intercepting unreflected light rays, characterized in that the cap is surrounded at a distance d by a screening ring which extends over a height h in the direction of the light emission window" in as complete detail as recited in independent claims 1 and 6 has been misinterpreted by the applicant for the following reasons; one, figure 14 of Monet shows a cup-shaped cap 400 surrounding the light source and the cap has annular elements 420, 426 and 427 (not labeled a side walls a cited by the applicant) and second, as defined by Webster's dictionary on line as a relating to or forming a ring as taught by Monet (column 8, lines 45-67) and as taught in the MPEP 2111 the claims has been broadly interpreted by the examiner.

For the reasons cited above the arguments regarding dependent claims 2, 4, 5, 7, 9 and 10 rejections stand.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John A. Ward whose telephone number is 571-272-2386. The examiner can normally be reached on Monday - Friday.
